

FLEXILOCK® TRAY CONSTRUCTION

This patented tray joint allows rapid installation of tray panels in vessel shops or in the field. Flexilock® tray construction eliminates the requirement for hardware between adjacent tray panels and provides for error-free deck installations. Koch-Glitsch's Flexilock tray construction is the primary building block of the HORIZON™ technology. If you plan to shop-install trays, then you need the insurance provided by the Horizon technology.

FLEXILOCK TRAY CONSTRUCTION CAN BE USED TO:

- Reduce hardware requirements
- Improve valve coverage
- Provide error-free deck installation
- Dramatically reduce installation time
- Strengthen joint and uplift tolerance
- Promote in-shop installations
- Cancel vibration-induced panel shifting
